

Country	South Africa
City	Nelspruit
Project Name	Mombela FIFA World Cup 2010 Stadium
Date Completed	2010
Product	Handycoat Exterior & Handycoat Interior EZ-Skim

The purpose built 40,929 seat stadium was one of the ten venues for the FIFA World Cup South Africa 2010. Built by a consortium consisting of Basil Read Construction and Bouygues Construction, one of the most interesting features is the roof support in the shape of a giraffe. The stadium is the centrepiece of a proposed wider sports precinct for athletics and cricket as well as other sporting activities.

Terraco's premier surface preparation products, Handycoat Exterior and Handycoat Interior EZ-Skim, were used prior to the application of the Kansai Plascon decorative paints. These versatile, eco-friendly, low VOC, ready-mixed, levelling and skimming products are specifically designed to suit different end purposes and are used by professional plasterers and painters, as well as DIY enthusiasts, because they are so easy to apply.

Whether you need to skim new or old surfaces, old wall papered surfaces, joint gypsum boards, patch cracks and blemishes in concrete, or simply skim rendered walls in a quick and economical way, the Terraco Handycoat range of surface preparation products is the way to go.
