

Country	United Arab Emirates
City	Dubai
Project Name	Dubai Palm Island and Jumeirah Beach Residence
Date Completed	On going
Product	Sprayplaster Systems

Spray applied plasters have been widely used in Europe since the 1960's and is today one of the main forms of plastering used in modern building systems. Terraco with its Sprayplaster systems is a market leader in spray-applied surface preparation compounds.

The construction boom in Dubai saw the use of Terraco Sprayplaster systems being used extensively by most of the construction companies during the building process happening on the Palm Island Dubai – private villas, residential apartment blocks and numerous hotels, including the Atlantis Hotel & Resort. The same can be said of the adjacent Jumeirah Beach Residence (JBR) district where 34 tower blocks were plastered using Terraco Sprayplaster.

Terraco Sprayplaster is a range of ready-mixed and polymer modified cementitious, spray applied plasters. Sprayplaster is applied on millions of square metres of walls and ceilings around the globe every year. These are long-life products with a guaranteed performance.
